

# Evans-Hamilton, Inc.

EHI staff has proven experience and extensive knowledge in developing and utilizing a wide variety of met-ocean instrumentation. Measurements using acoustic Doppler current profilers (ADCPs) are a particular specialty of EHI. We own and maintain an extensive suite of oceanographic and freshwater measurement instrumentation. Coupled with our office locations strategically placed throughout the US, EHI is well prepared and positioned to provide rapid-response measurements and services, as well as management and coordination of highly complex longer-term projects.
